Designed to tackle one of the big challenges in trench collapse rescue, the Trench Cushion Kit has the equipment you need to quickly and safely support your shoring panels. With our proven trench bag system you can significantly reduce the time needed to backfill your shoring panels and maintain a vertical surface for support. The Trench Cushion Kit includes two low pressure square cushions with a 3.25 ton (3 M ton) capacity that can fill up to an 18" (46 cm) void. Each cushion is fitted with o-ring harnesses for ease in lowering into the trench and a yellow centering cross to help in positioning the cushions along the sides of the trench wall. The kit is completed with two single cushion controllers, 1" X 20' (2,54 cm X 66,1 m) red and blue connecting hoses, and a 3/8" X 16' (0,95 cm X 4,8 m) high pressure hose.

Coupled with our Paratech Rescue Struts, this kit will equip you with the right tools for your next trench collapse rescue.
