**RESCUE STARTS HERE**

## SHEETROCK & MASTER HOOKS

### **Paratech Firefighting Tools**

These hooks provide a more versatile design that achieves a secure purchase in all types of ceiling and wall material.

**Larger Contact Point-** A large 4" contact point allows for greater areas of sheet rock or lath and plaster to be pulled with each downward thrust.

**Larger Penetrating Teeth-** The teeth penetrate tin roofs in three places to allow a better purchase so it will not pull through.

**Combination Rake and Hoe-** This feature allows for easy overhaul of smoldering debris piles, hay bales and rags.

**Penetration-** A honed point makes penetration easier in the toughest of materials. The arched hook at the back of the blade adds a leverage point for greater flexibility in tight spots.

**Exceptional Pry Action-** The large tooth area and head mass allow the teeth to be placed behind heavy mouldings or on the hinge side of doors for easy removal by prying.

\*Note: Available in 3 handle styles and with 2 choices of shaft material.

*Sheetrock Hook*

*Master Hook  
Smaller version of the sheetrock hook 1 1/2" wide, for easier penetration of material.*

## BOSTON RAKE HOOK

The long flat blade and extended shaft make it ideal for pulling lath and plaster walls and ceiling, spreading out debris during overhaul, or any other difficult overhaul jobs.

\*Note: Available in 3 handle styles and with 2 choices of shaft material.

*A forged steel, L-shaped hook.*

## MULTI-HOOK

Multi-Hook is highly effective in the rapid removal of wood, lath and plaster, tin and metal sheet walls and ceiling, plasterboard, fiberboard and sheetrock.

**MANGANESE BRONZE HEAD-**Special malleable alloy of manganese bronze with a breaking strength over 110,000 PSI is used for strength, durability and to decrease the possibility of sparks in an explosive atmosphere.

**Flared ADZ-** The ADZ on both sides is flared for a larger pulling surface at the contact point and easy removal of large areas of material.

**Pointed Hook-Head-** Specially tapered hook head point can be thrust through all materials more easily than conventional hooks.

## PIKE HOOK

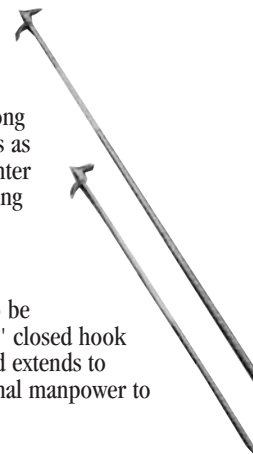

The old stand-by in manganese bronze with greater pulling surface.

*Pike Hook*

## EXTENSION HOOK

The extension hook gives the firefighter several hooks in one. This tool can be extended from 6' to 10' in length. The shorter closed length lets you take the "Long Hook" down hallways and around corners as well as fitting it on an elevator. The firefighter is also able to open up that "second" ceiling for more effective ventilation.

## HIGH-RISE HOOK

A shorter version of the extension hook to be combined with your high-rise pack. The 3' closed hook can be carried with the high-rise pack and extends to 4 1/2' for effective overhaul without additional manpower to carry another tool.

\*Note: Available in 3 handle styles.

## TRASH RAKE HOOK

This hook was originally used in Los Angeles. Although used primarily to overhaul trash and rubbish, it does an outstanding job in roof ventilation and pulling of lath and plaster-an excellent overhaul tool.

\*Note: Available in 3 handle styles and with 2 choices of handle material.

## CLOSET HOOKS

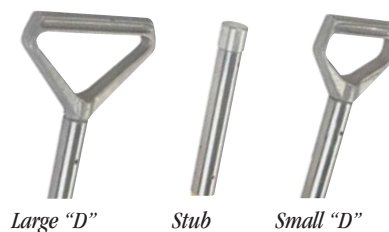

Shorter in length (approx. 33") they are available in any combination of quality shafts, heads and handles that are available with the Overhaul and Multi-Purpose Tools.

\*Note: Available in 3 handle styles and with 2 choices of handle material.

## HANDLE STYLES

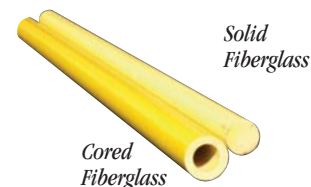

"D" handle in small and large for maximum pulling power. Stub handle for comfort and ease of fit in hand.

## SHAFT MATERIAL

1 1/4" Cored fiberglass for greater rigidity with reduced weight.

1" Solid fiberglass for maximum strength.

**Paratech Incorporated** offers tools in standard lengths of 3'-6' available for immediate delivery, and custom lengths by special order.

We are committed to the manufacture of a high quality, heavy-duty tool, designed with pride by firemen who use them. **Paratech Incorporated** makes rugged, no frills tools designed for everyday use without needless and impractical features.
